

# Decommissioning

Nuvia has a long-established track record in decommissioning, dismantling and disposal of nuclear and hazardous non-nuclear facilities around the world.

Having pioneered the development of strategies and methodologies for many such facilities, we have in-depth knowledge and experience to bring readily to a decommissioning project. With all key skills in-house; integrated management ensures a holistic approach and responsibility for its success. At Nuvia, our people are our strength. We believe in outstanding professionalism and technical expertise, and strong team-building.

# Decommissioning

## Our technical consultants

We have international experts who will advise on the technical aspects, optioneering studies, decommissioning, planning and cost estimation. We prepare the safety case and review it with you. We also provide the project management to keep to costs, deadlines and regulatory and safety requirements.

Our service is to the same exacting standards for hazardous non-nuclear facilities, such as pharmaceutical, biological or chemical research and manufacturing facilities, and oil and gas production where Naturally Occurring Radioactive Material (NORM) problems exist.

In situations where operations are difficult or where novel technologies or methods are required, we have both the expertise and experience to plan and carry out decommissioning and bring it to a safe and successful conclusion.

## The project

We undertake decommissioning and decontamination of plant and buildings providing key services and wide range of techniques:

- Health Physics Services
- Post Operational Clean Out (POCO), dismantling and strip out
- Decontamination Operations
- Size reduction, waste minimisation and recycling
- Contamination control
- Containment systems
- Dismantling and demolition
- Remote handling equipment and operations
- Waste management (approvals, logistics and processing)
- Site characterisation and land remediation.
